Technical Operations · Incident Management · AI & LLM Automation

PROFESSIONAL SUMMARY

Technical Operations professional with 3.5+ years at Revolut spanning company-wide incident command, quality governance, and data-driven process optimisation. Owned a recurring quality-audit programme covering 2,000+ tickets and designed process changes projected to cut duplicate escalations by up to 60%. Trained and onboarded 9 engineers; led shifts as single operational lead. Builds and operates production LLM automation hands-on — model cascading, prompt caching, token-cost optimisation — the same discipline required to run AI-powered customer operations at scale.

CORE SKILLS

Operations & Leadership: Team Training & Onboarding; Shift Leadership (SDO); Escalation & Reassignment Governance; Incident Command (P0–P2); Quality Control & Dispute Arbitration; Stakeholder Management; Process Design & Optimisation

Data & Analysis: SQL (Metabase, Looker); Root Cause Analysis; GCP Logs; Grafana; New Relic; Apache Airflow; KPI & Metrics Ownership; Closure-Code Analytics

AI & Automation: Anthropic Claude API; OpenAI Whisper API; Model Cascading; Prompt Caching; Token-Cost Optimisation; Python (FastAPI); TypeScript (Node.js); Webhook Architecture; Production Deployment (systemd, nginx/Caddy); pytest/vitest

PROFESSIONAL EXPERIENCE

Revolut — Subject Matter Expert, Technical Operations (Quality Department)

January 2023 – Present · Warsaw, Poland

Leadership & Team Development

- Trained and onboarded 9 engineers into the Product Bugs Major (PBM) role, standardising investigation and escalation practices across the team.
- Served as Special Duties Officer (SDO): single shift lead accountable for operational stability, Jira backlog health, and real-time technical guidance to engineers throughout the shift.
- Acted as final decision maker on company outage calls (RTM SPOT: Outage vs No-Outage) and as independent quality arbiter in disputes between Tech Support and Customer Support management (KGAP/BCKG).

Process Optimisation & Advanced Analysis

- Owned a standing quarterly quality-audit programme: 2,000+ tickets analysed across six closure-code audits (2023–2025); designed action plans projected to cut duplicate escalations by up to 60%.
- Ran recurring GCP-log analyses (600+ tickets, 3 cycles) that drove 9+ shipped in-app and Back Office messaging fixes and self-service proposals reducing reliance on Tech Support escalation.
- Audited and expanded the team's Metabase SQL query base; audited and rewrote 19 Confluence pages across 8 product verticals, standardising troubleshooting and reducing incorrect escalations.

Incident Command (Company-wide)

- Sole on-call Incident Watchman Manager, including night shifts: full ownership of alerts, tickets, and outage management across the entire company (EEA, UK, Global regions).
- Owned the end-to-end lifecycle of P0–P2 incidents affecting payments, transfers, and authentication: incident channels within minutes, mobilisation of Product and Engineering leadership, risk reports within 5–10 minutes, live coordination of rollbacks, fix validation and closure.

AI & AUTOMATION PROJECTS

Production systems, public on GitHub (github.com/umarovm)

- **LLM Workflow Automation (Python, Claude API):** job-application pipeline using model cascading (Haiku for analysis, Sonnet for generation), prompt caching, and structured data funneling cutting token costs by ~80%; automated ATS-friendly PDF generation (RenderCV/Typst); Notion tracking with scheduled follow-ups.
- **Algorithmic Trading System (Python, FastAPI):** webhook-driven live trading across two isolated exchange accounts with risk management, circuit breakers, Telegram monitoring, and security hardening; grew live capital 25% in 1–3 months.

- **Tokenized-Equity Trading System (TypeScript, Node.js):** multi-wallet execution on Solana via the Jupiter Swap API with per-position state machines, on-chain-confirmed tracking, and configurable risk controls.
- **Voice Transcription Bot (Python, Whisper API):** multi-user Telegram bot with per-user API keys, parallel async processing, and automatic chunking for files above API limits.

EDUCATION

Master's Degree, Management (E-Business Project Management) — Vistula University, Warsaw · 2023–2025 · GPA 4.75

Bachelor's Degree, Economics (Economics of an Enterprise) — Vistula University, Warsaw · 2020–2023 · GPA 4.46

CERTIFICATIONS

- Data Engineer Associate — DataCamp (incl. hands-on SQL and pandas projects, public on GitHub)
- Python for Data Science, AI & Development — Coursera (IBM)
- Introduction to Relational Databases — Coursera (IBM)
